Proceedings

of the Analytical Division of

The Chemical Society

Volume 16 1979

Published by
THE CHEMICAL SOCIETY
BURLINGTON HOUSE, LONDON, W1V 0BN

PROCEEDINGS

OF THE

ANALYTICAL DIVISION OF THE CHEMICAL SOCIETY

Officers of the Analytical Division of the Chemical Society

President
R. Belcher

Hon. Secretary
P. G. W. Cobb

Hon. Treasurer
J. K. Foreman

Hon. Assistant Secretaries
D. I. Coomber and D. C. M. Squirrell

Hon. Publicity and Public Relations Officer
A. Townshend

Secretary
Miss P. E. Hutchinson

THE ANALYST PUBLICATIONS COMMITTEE

Chairman
J. M. Ottaway

H. J. Cluley
*P. Gray
J. N. Miller
G. E. Penketh
T. B. Pierce
W. H. C. Shaw
D. Simpson
A. Townshend
*P. C. Weston
J. Whitehead

**Ex Officio* members

Editor, Proceedings
P. C. Weston

Assistant Editors
Mrs. J. Brew, R. W. Hazell, R. A. Young

Printed by Heffers Printers Limited Cambridge England

NAME INDEX

A

Abdel Aziz, M. E. M., and **Thorburn Burns, D.** Problems in the analysis of chromite ores: precision spectrophotometric determination of total iron, 25.

Adriaenssens, P. I. *See* **Prescott, L. F.**

Akusoba, E. U., and **Miller, J. N.** A phosphorescent label for phenolic compounds, 93.

Ahmadi, B., and **Speakman, P. T.** Polyacrylamide gel electrophoresis in the presence of sodium dodecylsulphate in wool protein purification and relative molecular mass determination, 236.

Alder, J. F., Bombelka, R. M., and **Kirkbright, G. F.** Some studies in inductively coupled plasma emission spectroscopy, 21.

Analytical Methods Committee. Antibiotics in animal feedingstuffs: units, standard materials and their relationship to amounts expressed by mass, 246.

B

Baird, A. W. Industrial toxic hazards, 82.

Bagon, K. R. High-performance liquid chromatographic separation of antibiotics and antibacterials, 324.

Balali, M. *See* **Prescott, L. F.**

Ball, D. J. Aspects of particulate monitoring in the ambient atmosphere, 317.

Bark, L. S. Microchemistry—Past, present and future, 127.

—— Presentation dinner in honour of, 47.

Barker, P. G. The handling of analytical chemical data, 234.

Barlow, P. J., Crump, D. R., Khera, A. K., and **Wibberley, D. G.** Some analytical problems in the determination of mercury in biological materials by a cold vapour technique, 15.

Baty, J. D. Mass spectrometry in a biomedical environment, 51.

Belcher, R. Robert Martin Caven (1870–1934). Biography, 175.

Betteridge, D. Teaching the principles of surface analysis, 231.

Bishop, E. New member of Council, 343.

Bombelka, R. M. *See* **Alder, J. F.**

Braithwaite, R. Measurement of antidepressant drugs, 69.

Bridges, J. W. *See* **Handley, G.**

British Standards Institution. BS 718: Density hydrometers, 277.

—— BS 5736: Evaluation of medical devices for biological hazards. Part 1. Guide for the selection of biological methods of tests, 312.

—— BS 5732: Glass disposable pasteur pipettes, 337.

—— BS 5381: Methods for determination of physical properties of tobacco and tobacco products. Part 3. Determination of free combustion rates, 312.

—— BS 4289: Methods for the analysis of oilseeds. Part 1. Reduction of contract samples to analysis samples. Part 3. Determination of moisture and volatile matter content, 143.

British Standards Institution—*continued*

—— BS 5666: Methods of analysis of wood preservatives and treated timber. Part 1. General consideration and sampling and preparation of materials for analysis, 143.

—— BS 5666: Methods of analysis of wood preservatives and treated timber. Part 3. Quantitative analysis of preservatives and treated timber containing copper - chromium - arsenic formulations, 190.

—— BS 5365: Methods of sampling and test for anhydrous hydrogen fluoride for industrial use. Part 3. Determination of water content (Karl Fischer method). Part 4. Determination of hexafluorosilicic acid content. Part 5. Determinations of sulphur dioxide content, 190.

—— BS 5598: Methods of sampling and test for halogenated hydrocarbons. Parts 1–6, 190.

—— BS 5659: Methods of test for acid-grade fluorspar. Part 1. Determination of flotation agents. Part 2. Determination of loss in mass at 105 °C. Part 3. Determination of sulphide content, 144.

—— BS 5688: Methods of test for boric acid, boric oxide, disodium tetraborates, sodium perborates, and crude sodium borates for industrial use. Parts 1–21, 190.

—— BS 4401: Methods of test for meat and meat products. Part 12. Determination of starch content (reference method), 312.

—— BS 5697: Methods of test of starch, and its derivations and by-products. Part 1. Determination of nitrogen content by the Kjeldahl method (titrimetric method). Part 2. Determination of nitrogen content by the Kjeldahl method (spectrophotometric method), 144.

—— BS 2690: Methods of testing water used in industry. Part 100. Foreword, scope and general requirements. Part 102. Hydrazine, 144.

—— BS 5657: Petroleum products—gasoline—determination of lead content—iodine monochloride method, 143.

—— BS 5497: Precision of test methods. Part 1. Determination of repeatability and reproducibility for a standard test method, 190.

—— BS 4427: Test methods for condensed phosphates. Part 12. Condensed phosphates for industrial use (including foodstuffs)—determination of arsenic content: silver diethyldithiocarbamate photometric method, 358.

—— BS 5661: Wood preservatives and treated timber. Part 4. Quantitative analysis of preservatives and treated timber containing copper naphthenate, 358.

Broadbridge, R. A., and **Lightbown, J. W.** Hygroscopic units: a standard dilemma, 335.

Brown, L. *See* **Prescott, L. F.**

Bryan, D. *See* **Matlin, S. A.**

Burguera, J. L., and **Townshend, A.** Monitoring chemiluminescent reactions by flow injection analysis, 263.

Burns, I. W. *See* **Jones, A. D.**

Butterworth, P. J., and **Plummer, D. T.** Affinity chromatography: separation of alkaline phosphatase and of acetylcholinesterase, 182.

C

Campbell, W. A. The analytical work of George Pearson MD, FRS (1751–1828). Biography, 344.
Carpenter, W. J. Determination of residual solvents in flexible packaging materials, 130.
Chamberlain, J. Quantitative analysis of drugs in biological fluids by high-performance liquid chromatography, 264.
Chan, L. *See* **Matlin, S. A.**
Chapman, D. I. Immunoassays and dope detection in sport, 255.
Cluley, H. J. *Analyst* Publications Committee, 1.
Cochrane, G. C. New member of Council, 343.
Coles, L. E. Obituary of S. Dixon, 239.
Connell, D. L., Spahr, P. R. A., Purdy, S. J., and **Truter, E. V.** Analysis of fatty amides by thin-layer chromatography, 238.
Cooke, M. *See* **Prescott, A. M.**
Cooksey, B. G. *See* **Macintyre, D. S.**
Cosgrove, R. F., and **Jones, G. T.** Rapid microbiological assay for tiamulin in animal feeds based on the measurement of pH, 320.
Crabtree, H. E., Nicholls, P., and **Truter, E. V.** Identification of the internal lipids of the wool fibre by thin-layer chromatography, 235.
Croft, A. G. New member of Council, 245.
Crossley, D. Development and applications of high temperature, high pressure dissolution in a sealed tube, 149.
Crow, D. R. Analytical chemistry at the Polytechnic, Wolverhampton, 215.
Crump, D. R. *See* **Barlow, P. J.**

D

Dajer de Torrijos, L., and **Greenhow, E. J.** Cyanoethylation reactions in catalytic thermometric titrimetry, 7.
Davies, P. B. Measurement of small concentrations of stable and transient molecules using infrared laser spectroscopy, 99.
Dean, P. D. G. Alternatives in the design of affinity matrices, 208.
de Galan, L. Assessment of high-frequency induced plasma for atomic-emission spectrometry, 179.
Dickes, G. J. Chromatography and pharmaceutical problems in a Public Analyst's laboratory, 266.
Dixon, P. F., Lukha, P., and **Scott, N. R.** Clinical analysis of steroids by HPLC, 302.
Dixon, S. Obituary, 189, 239.

E

Education and Training Group Committee. Education, training and research in analytical chemistry in universities and polytechnics, 107.
Egan, H. New Member of Council, 245.
Elwell, W. T. Obituary, 120, 189.

F

Farrow, R. N. P., and **Lewis, G. F.** Determination of heavy metals: the evolution of spectrochemical techniques, 183.
Federation of European Chemical Societies Working Party on Analytical Chemistry. European Analytical Column 2, 275.
Fehér, Zs. *See* **Pungor, E.**
Fell, G. S. Essential and toxic elements in human medicine, 77.
Felton, P. G. Measurement of particle of droplet size distribution by laser diffraction, 103.
Fields, B. Studies in flow injection analysis, 4.
Fogg, A. G. The teaching and importance of polarography, 352.
Frei, R. W. Recent developments in post-column reactions for HPLC, 289.
Fuller, C. W. Interference effects in industrial inorganic analytical chemistry, 199.
—— Presentation of the Fifth Society for Analytical Chemistry Silver Medal to, 47.

G

Godfray, M. F. Microscopy of contaminants of pharmaceuticals and their characterisation, 160.
Goldie, D. J., West, P. M., and **Ismail, A. A. A.** Automation of radioimmunoassays, 250.
Granger, R. J., and **Griffiths, B. W.** Possibilities for improved terrestrial analytical instruments from future space developments, 260.
Green, J., and **Jones, A.** Obituary of S. A. Price, 336.
Greenfield, S. Award of 14th Society for Analytical Chemistry Gold Medal to, 1.
Greenhow, E. J. *See* **Dajer de Torrijos, L.**
Grey Morgan, C. Single micro-particle and atomic particle detection, 97.
Griffiths, B. W. *See* **Granger, R. J.**
Griffiths, D. New member of Council, 245.
Griffiths, P. D. Analytical methods in clinical analysis—the changing scene, 50.
Guiochon, G. Hazards of high-pressure jets of solvents. (Correspondence), 359.

H

Handley, G., Miller, J. N., and **Bridges, J. W.** Development of fluorescence immunoassay methods of drug analysis, 26.
Hanson, N. W. Obituary, 278.
Harrison, A. J. Microchemistry and the local authority, 134.
Hartley, A. W. Obituary, 315.
Haywood, P. E. Chromatographic systems in screening procedures for doping, 265.
Hemsley, D. A. Quality control of plastics films using light microscopy, 157.

SUBJECT INDEX

A

Acetylcholinesterase separation: Affinity chromatography: separation of alkaline phosphatase and of acetylcholinesterase. Butterworth and Plummer, 182.

Active gases: Static mass spectrometry for high sensitivity analysis of —— and stable isotope ratio measurements. Pillinger, 259.

Affinity chromatography: *See* **Chromatography, affinity.**

Affinity matrices: Alternatives in the design of ——. Dean, 208.

Alkaline phosphatase separation: Affinity chromatography: separation of alkaline phosphatase and of acetylcholinesterase. Butterworth and Plummer, 182.

4-Aminopyridine: Rapid development of a high-performance liquid chromatographic assay for —— in body fluids. Scott, 322.

Analysis, quantitative: Quantitative analysis of drugs in biological fluids by high-performance liquid chromatography. Chamberlain, 264.

Analyst Publications Committee, 1.

Analytical chemistry at the Polytechnic, Wolverhampton. Crow, 215.

—— in the University of Wales Institute of Science and Technology, Cardiff. Thomas, 169.

—— trust fund, 42.

Definition and priorities of chairs in ——. Thorburn Burns. (Correspondence), 217.

Education in ——: a retrospective view of Euroanalysis III, Dublin. Thorburn Burns, 48.

Education, training and research in —— in universities and polytechnics. Committee of the Education and Training Group of the Analytical Division of the Chemical Society, 107.

Electronics in the service of ——. Leppard, 233.

Interference effects in industrial inorganic ——. Fuller, 199.

The handling of analytical chemical data. Barker, 234.

Analytical Division: 7th A.G.M., 123.

Atomic Spectroscopy Group. 14th A.G.M., 89.

Automatic Methods Group. 13th A.G.M., 149.

Biological Methods Group. 34th A.G.M., 149.

Chromatography and Electrophoresis Group. 14th A.G.M., 89.

Distinguished Service Award conferred on K. L. Smith, 85, 125.

East Anglia Region. 11th A.G.M., 89.

Education and Training Group. 8th A.G.M., 90.

Electroanalytical Group. 9th A.G.M., 124.

Extraordinary General Meeting, 276.

Joint Pharmaceutical Analysis Group. 9th A.G.M., 125.

Microchemical Methods Group. 35th A.G.M., 89.

Midlands Region. 24th A.G.M., 89.

Midlands Region Secretary, 239.

New members of Council, 245, 283, 343.

North East Region. 13th A.G.M., 149.

North West Region. 54th A.G.M., 124.

North West Region. Presentation dinner for Professor L. S. Bark, 47.

Particle Size Analysis Group. 13th A.G.M., 90.

Radiochemical Methods Group. 12th A.G.M., 90.

Analytical Division—*continued*

Scottish Region. 44th A.G.M., 124.

South East Region. 4th A.G.M., 124.

8th Theophilus Redwood Lecture by E. Pungor, 347.

Theophilus Redwood Lecturer for 1980, L. S. Bark, 85.

Thermal Methods Group. 14th A.G.M., 90.

Western Region. 24th A.G.M., 124.

Analytical instruments: Possibilities for improved terrestrial —— from future space developments. Granger and Griffiths, 260.

Analytical methods in clinical analysis—the changing scene. Griffiths, 50.

Analytical potentiometry: Why teach ——? Thomas, 349.

Analytical techniques currently used in industry—which techniques are insufficiently taught? Newman, 228.

Which techniques are insufficiently taught? Keattch. (Correspondence), 359.

Animal feedingstuffs: Antibiotics in ——: units, standard materials and their relationship to amounts expressed by mass. Analytical Methods Committee, 246.

Rapid microbiological assay for tiamulin in animal feeds based on the measurement of pH. Cosgrove and Jones, 320.

Antibacterials: High-performance liquid chromatographic separation of antibiotics and ——. Bagon, 324.

Antibiotics in animal feedingstuffs: units, standard materials and their relationship to amounts expressed by mass. Analytical Methods Committee, 246.

High-performance liquid chromatographic separation of —— and antibacterials. Bagon, 324.

Antidepressants: HPLC analysis of —— on silica gel. Watson, 293.

Measurement of antidepressant drugs. Braithwaite, 69.

Assay, microbiological: Rapid microbiological assay for tiamulin in animal feeds based on the measurement of pH. Cosgrove and Jones, 320.

Atmosphere: Aspects of particulate monitoring in the ambient ——. Ball, 317.

Atmospheric pollutants: Laser remote sensing of ——. Sharp, 197.

Atmospheric pollutants determination: Determination of atmospheric pollutants by gas phase Auger electron spectrometry. Killoran and Tyson, 29.

Atomic-absorption spectrophotometry: *See* **Spectrophotometry, atomic-absorption.**

Atomic-emission spectrometry: *See* **Spectrometry, atomic-emission.**

Atomic particle detection: Single micro-particle and ——. Grey Morgan, 97.

Auger electron spectrometry: *See* **Spectrometry, Auger electron.**

B

Biological fluids: Quantitative analysis of drugs in —— by high-performance liquid chromatography. Chamberlain, 264.

Biological materials: Developments in atomic-absorption and atomic-fluorescence spectrometric techniques for biological materials. Ottaway, 64.
Some analytical problems in the determination of mercury in —— by a cold vapour technique. Barlow, Crump, Khera and Wibberley, 15.
Biomedical environment: Mass spectrometry in a ——. Baty, 51.
Biosynthetic pathway: Development of HPLC methods for the determination of enzymes of the haem ——. Lim, 305.
Body fluids: Rapid development of a high-performance liquid chromatographic assay for 4-aminopyridine in ——. Scott, 322.
Bonded phases: *See also* **Chemically bonded phases.**
Preparation of stationary phases for food chemistry separations. Jones, Burns, Smith and Richardson, 356.
British Standards: 143, 190, 277, 312, 337, 358.

C

Calcium: Selectivity rating of —— ion-selective electrodes. Moody, Nassory and Thomas, 32.
Carbon-skeleton gas chromatography: Application of —— to the analysis of polychlorinated compounds. Prescott and Cooke, 10.
Caven, Robert Martin: Biography. Belcher, 175.
Chairs in analytical chemistry: Definition and priorities of ——. Thorburn Burns. (Correspondence), 217.
Chemically bonded phases: Synthesis and applications of new, chemically bonded stationary phases for HPLC. Matlin, Tinker, Tito-Lloret, Lough, Chan and Bryan, 354.
Chemiluminescent reactions: Monitoring —— by flow injection analysis. Burguera and Townshend, 263.
Chromatography and pharmaceutical problems in a Public Analyst's laboratory. Dickes, 266.
Chromatographic systems in screening procedures for doping. Haywood, 265.
Strategy for ——. Purnell, 136.
Chromatography, affinity: Affinity chromatography: separation of alkaline phosphatase and of acetylcholinesterase. Butterworth and Plummer, 182.
Alternatives in the design of affinity matrices. Dean, 208.
Chromatography, gas: Application of carbon-skeleton —— to the analysis of polychlorinated compounds. Prescott and Cooke, 10.
Chromatography, gas - liquid: Determination of residual solvents in flexible packaging materials. Carpenter, 130.
Measurement of antidepressant drugs. Braithwaite, 69.
Chromatography, high-performance liquid: Clinical analysis of steroids by ——. Dixon, Lukha and Scott, 302.
Development of HPLC methods for the determination of enzymes of the haem biosynthetic pathway. Lim, 305.
High-performance liquid chromatographic separation of antibiotics and antibacterials. Bagon, 324.
HPLC analysis of antidepressants on silica gel. Watson, 293.
HPLC in clinical pharmacological studies of analgesic drugs. Prescott, King, Brown, Balali and Adriaenssens, 300.
Chromatography, high-performance liquid —*continued*
Preparation of stationary phases for food chemistry separations. Jones, Burns, Smith and Richardson, 356.
Quantitative analysis of drugs in biological fluids by ——. Chamberlain, 264.
Rapid development of a high-performance liquid chromatographic assay for 4-aminopyridine in body fluids. Scott, 322.
Recent developments in post-column reactions for ——. Frei, 289.
Synthesis and applications of new, chemically bonded stationary phases for HPLC. Matlin, Tinker, Tito-Lloret, Lough, Chan and Bryan, 354.
The role of —— in the investigation of the poisoned patient. Stewart, 297.
Chromatography, liquid: Injection techniques in liquid chromatography. Simpson, 222.
Chromatography, thin-layer: Analysis of fatty amides by thin-layer chromatography. Connell, Spahr, Purdy, and Truter, 238.
Identification of the internal lipids of the wool fibre by thin-layer chromatography. Crabtree, Nicholls and Truter, 235.
Some aspects of quantitative thin-layer chromatography. Lyle and Tehrani, 12.
Chromite ores: Problems in the analysis of ——: precision spectrophotometric determination of total iron. Abdel Aziz and Thorburn Burns, 25.
Cigarette smoke analysis: *See* **Tobacco analysis.**
Clinical analysis of steroids by HPLC. Dixon, Lukha and Scott, 302.
Analytical methods in —— —the changing scene. Griffiths, 50.
Data-acquisition procedures for clinical analyses. McLelland, 63.
Determination of paraquat in clinical practice using radioimmunoassay. Levitt, 72.
Enzyme immunoassay in clinical practice. Marks, 53.
Fluorimetry and phosphorimetry in ——. Miller, 56.
Clinical pharmacology: HPLC in clinical pharmacological studies of analgesic drugs. Prescott, King, Brown, Balali and Adriaenssens, 300.
Cold vapour atomic-absorption spectrophotometry: Some analytical problems in the determination of mercury in biological materials by a cold vapour technique. Barlow, Crump, Khera and Wibberley, 15.
Complexes, dilute concentrations: Complex concentrations that are too dilute to analyse—the dilemma and a solution. Williams, 81.
Computer simulation: Complex concentrations that are too dilute to analyse—the dilemma and a solution. Williams, 81.
Correspondence: 217, 276, 312, 359.
Corticosteroids: Stability of topical steroids. Li Wan Po, Irwin and Yip, 333.
Coupled enzyme techniques: Immuno and —— in crime detection. Moffatt, 256.
Crime detection: Immuno and coupled enzyme techniques in ——. Moffat, 256.
Cyanoethylation reactions in catalytic thermometric titrimetry. Dajer de Torrijos and Greenhow, 7.

D

Data-acquisition procedures for clinical analyses. McLelland, 63.

Data handling: The handling of analytical chemical data. Barker, 234.
Distinguished Service Award: Conferred on K. L. Smith, 85, 125.
Dope detection: Chromatographic systems in screening procedures for doping. Haywood, 265.
Immunoassays and —— in sport. Chapman, 255.
Droplet size distribution: Measurement of particle or —— by laser diffraction. Felton, 103.
Drug analysis: Development of fluorescence immunoassay methods of ——. Handley, Miller and Bridges, 26.
Drugs: *See also* **Pharmaceuticals.**
Quantitative analysis of —— in biological fluids by high-performance liquid chromatography. Chamberlain, 264.
The role of HPLC in the investigation of the poisoned patient. Stewart, 297.
Drugs, analgesic: HPLC in clinical pharmacological studies of analgesic drugs. Prescott, King, Brown, Balali and Adriaenssens, 300.

E

Education in analytical chemistry: a retrospective view of Euroanalysis III, Dublin. Thorburn Burns, 48.
—— training and research in analytical chemistry in universities and polytechnics. Committee of the Education and Training Group of the Analytical Division of the Chemical Society, 107.
Analytical techniques currently used in industry—which techniques are insufficiently taught? Newman, 228.
Electronics in the service of analytical chemistry. Leppard, 233.
Teaching the principles of surface analysis. Betteridge, 231.
Electroanalysis: Potentiometric sensors in on-line applications. Ivaska, 283.
Electronics in the service of analytical chemistry. Leppard, 233.
Electrophoresis, polyacrylamide gel: Polyacrylamide gel electrophoresis in the presence of sodium dodecylsulphate in wool protein purification and relative molecular mass determination. Ahmadi and Speakman, 236.
Emission spectroscopy: *See* **Spectroscopy, emission.**
EMIT: Enzyme-linked and homogeneous immunoassays including ——. Marks, 248.
Immuno and coupled enzyme techniques in crime detection. Moffat, 256.
Environmental pollution: Application of ion-selective electrodes to —— problems in the steel industry. Macintyre, Cooksey and Ottaway, 18.
Enzyme determination: Development of HPLC methods for the determination of enzymes of the haem biosynthetic pathway. Lim, 305.
Enzyme immunoassay in clinical practice. Marks, 53.
Equipment news: 83, 111, 139, 162, 211, 267, 307.
Essential elements: Essential and toxic elements in human medicine. Fell, 77.
Essential and toxic trace elements in animals. Mills, 76.
Euroanalysis III: Education in analytical chemistry: a retrospective view of ——, Dublin. Thorburn Burns, 48.
European analysis: European Analytical Column 2. Federation of European Chemical Societies Working Party on Analytical Chemistry, 275.

F

Fat in fish and fish products. Herschdoerfer. (Correspondence), 312.
—— in fish and fish products. Manley. (Correspondence), 276.
Fatty amides: Analysis of —— by thin-layer chromatography. Connell, Spahr, Purdy and Truter, 238.
Fish: Fat in —— and fish products. Herschdoerfer. (Correspondence), 312.
Fat in —— and fish products. Manley. (Correspondence), 276.
Fish products: *See* **Fish.**
Flexible packaging materials: Determination of residual solvents in ——. Carpenter, 130.
Flow injection analysis: Monitoring chemiluminescent reactions by ——. Burguera and Townshend, 263.
Studies in ——. Fields, 4.
Fluorescence immunoassay: Development of —— methods of drug analysis. Handley, Miller and Bridges, 26.
Recent advances in molecular luminescence analysis. Miller, 203.
Fluorimetry and phosphorimetry in clinical analysis. Miller, 56.
Food chemistry: Preparation of stationary phases for —— separations. Jones, Burns, Smith and Richardson, 356.
Forensic science: Heavy metals in ——. Hickman, 186.
Fusion fluxes: The use of ——. Oliver, 151.

G

Gas chromatography: *See* **Chromatography, gas.**
Gas - liquid chromatography: *See* **Chromatography, gas - liquid.**
Gold Medal: Awarded to S. Greenfield, 1.

H

Hazards of solvent jets: Hazards of high-pressure jets of solvents. Guiochon. (Correspondence), 359.
Haem: Development of HPLC methods for the determination of enzymes of the —— biosynthetic pathway. Lim, 305.
Heavy metals in forensic science. Hickman, 186.
Determination of ——: the evolution of spectrochemical techniques. Farrow and Lewis, 183.
High-performance liquid chromatography: *See* **Chromatography, high-performance liquid.**
High pressure dissolution: Development and applications of high temperature, —— in a sealed tube. Crossley, 149.
High pressure jets: Hazards of —— of solvents. Guiochon. (Correspondence), 359.
High temperature dissolution: Development and applications of high temperature, high pressure dissolution in a sealed tube. Crossley, 149.
Human medicine: Essential and toxic elements in ——. Fell, 77.
Hygroscopic units: a standard dilemma. Broadbridge and Lightbown, 335.

I

Immunoassay methods in clinical chemical analysis. Whicher, 252.

Immunoassays and dope detection in sport. Chapman, 255.
Enzyme-linked and homogeneous —— including EMIT. Marks, 248.
Immuno and coupled enzyme techniques in crime detection. Moffat, 256.
Inductively coupled plasma: Some studies in —— emission spectroscopy. Alder, Bombelka and Kirkbright, 21.
Industrial analytical chemistry: Interference effects in industrial inorganic analytical chemistry. Fuller, 199.
Industry: Analytical techniques currently used in —— which techniques are insufficiently taught? Newman, 228.
Infrared laser spectroscopy: *See* **Spectroscopy, infrared laser.**
Injection techniques in liquid chromatography. Simpson, 222.
Inorganic analytical chemistry: Interference effects in industrial ——. Fuller, 199.
Interference effects in industrial inorganic analytical chemistry. Fuller, 199.
Ion-selective electrodes: Application of —— to environmental pollution problems in the steel industry. Macintyre, Cooksey and Ottaway, 18.
Applications of polarography and —— in the photographic industry. Weller, 176.
Selectivity rating of calcium ——. Moody, Nassory and Thomas, 32.
IUPAC Report: 240.
